- 1 What we claim as our invention is:
- 2 1. The combination comprising:
- a) a catch basin including,
- 4 1) an inlet through which storm water and pollutants flow into the catch
- 5 basin,
- 6 2) an outlet through which water flows out of the catch basin,
- 7 3) basin side walls and bottom and
- 8 b) a catch basin inlet grate,
- 9 c) a catch basin filter.
- d) an attachment means that couples the basin filter to the inlet grate by
- encircling the grate during both filtration and filter removal.
- 12 2. The attachment means according to claim 1 comprises a top edge
- of the filter which encircles the grate forming a bag opening which is
- adjustable to be made smaller in circumference than the circumference of the
- outside rim of the grate whereby the filter bag is prevented from accidentally
- separating from the inlet grate.
- 17 3. The attachment means according to claim 2 has a an attachment to decrease,
- fix and increase the circumference of the bag opening whereby the filter can
- be fixed to the grate or released from the grate.
- 20 4. The attachment means according to claim 2 comprises a pull cord to decrease,

- 1 fix, and increase the circumference of the bag whereby the bag attachment
- 2 can allow the filter to attach itself to the inlet grate or release itself from the
- 3 inlet grate.
- 4 5. The attachment means according to claim 1 which encircles the grate by using
- 5 one or more straps which are also joined to the filter bag.
- 6 6. The attachment means according to claim 1 comprises an attachment
- 7 which encircles the grate by one or more wires which are joined to
- 8 the filter bag.
- 9 7. The attachment means according to claim 1 which encircles the grate by
- one or more cables which are joined to the filter bag.
- 11 8. The attachment means according to claim 1 wherein the filter is essentially
- located on the top of the grate and the attachment to the grate is essentially
- located on the underside of the inlet grate.
- 14 9. The attachment means according to claim 1 wherein the filter essentially
- envelops the inlet grate during both filtration and removal.
- 16 10. The combination comprising:
- a. a catch basin including,
- 1) an inlet through which storm water and pollutants flow into the catch
- 19 basin,
- 20 2) an outlet through which water flows out of the catch basin,
- 21 3) basin side walls and bottom and
- b. a catch basin inlet grate
- c. a catch basin filter

- 1. d. an attachment that encircles the grate and thereby couples the basin filter to
- 2. the inlet grate during both filtration and filter removal.
- 3. 11. The catch basin filter according to claim 10 comprises a porous fabric
- 4. which allows storm water to pass through while retaining pollutants.
- 5. 12. The filter apparatus according to claim 10 is comprised of a chemical
- 6. absorbing material for the removal of hazardous waste.
- 7. 13. The attachment apparatus according to claim 10 comprises a filter bag top
- 8. edge which encircles the grate forming a bag opening with an inside
- 9. circumference which is adjustable to be made smaller than the outside
- 10. circumference of the inlet grate.
- 11. 14. The attachment apparatus according to claim 13 has a pull cord to pull
- 12. together, fix, and release the encirclement of the opening of the filter bag
- 13. to form a variable size opening including a smaller inside circumference
- 14. than the outside circumference of the grate.
- 15. The attachment apparatus according to claim 13 has a pull cord
- 16. comprising a wire.
- 17. 16. The attachment apparatus according to claim 13 has a pull cord
- 18. comprising a cable.
